

# Pathways to Successful Aging

## A 6-Hour Home Study Program for Health Professionals

This new evidence-based seminar describes five key factors that support successful aging: social interaction, physical activity, education, diet and sleep.

As a result of completing this program participants will be able to identify:

1. How social support is linked to wellbeing, cognition and longevity, while loneliness and isolation are identified with depression and dementia.
2. How physical activity supports neurogenesis, reduction of inflammation, normalization of blood glucose and enhancement of cell repair.
3. How the lifelong pursuit of learning is associated with reduced risk of cognitive decline and dementia.
4. How a healthy diet supports key neurotransmitters, protects the brain from Type 2 diabetes, rapid aging, cognitive decline and dementia.
5. How sound sleep supports memory consolidation, brain glucose metabolic activity and cognition.
