*Children and youth exposed to neglect, psychological stress and abuse develop impaired attachment styles that undermine the developing brain and immune system.*

*This program presents evidence-based methods of overcoming adverse childhood experiences through self-care, lifestyle, and psychological pathways to improved brain function.*

*Participants completing this program should be able to:*

1. Identify how adverse childhood experiences can impair the developing brain and alter the response to psychological stress.
2. Distinguish between secure, anxious and avoidant forms of attachment.
3. Describe how maltreatment can impair stress resilience, mood regulation, and impulse control across generations.
4. List several ways that early adversity can undermine the immune system.
5. Discuss how self-care and lifestyle can help overcome adverse childhood experiences.
6. Identify psychological pathways that can protect the brain from the toxic effects of mood, anxiety, trauma, and memory-related disorders related to adverse childhood experiences.

## The Long-Term Effects of Neglect and Abuse

- Neglect
- Abuse
